

Technical Assistance

Achievements

1st Quarter 2022

ACPA's engineering staff delivers consultation, specification interpretation, education, and other technical services to ACPA members, state and federal agencies as well as chapter/state partners. **These activities generate industry opportunities resulting in millions of dollars saved by members avoiding unwarranted penalties and pavement removal.** The following summary is a snapshot of work performed during the first quarter of 2022.

Airport Market

ACPA provided assistance to contractors and guidance to engineers and agencies that has already resulted in the avoidance of **\$2M** in unnecessary costs, with another **\$1M** in exposure costs potentially resolved.

Highway/SLR Market

Not including advocacy efforts at the federal and state agency levels, which create and preserve market opportunities for the industry, ACPA's 1Q efforts have resulted in savings of roughly **\$1M**.

Direct Agency Assistance

ACPA's expertise allows concerns to be addressed before they become problems, making it easier for agencies to choose concrete! Assistance also extends to contractors and suppliers by advocating for constructible designs and improved specifications. The concrete paving industry in general also benefits, as ACPA expertise helps ensure concrete paving construction goes smoothly and pavements perform to expectations, which facilitates market growth.

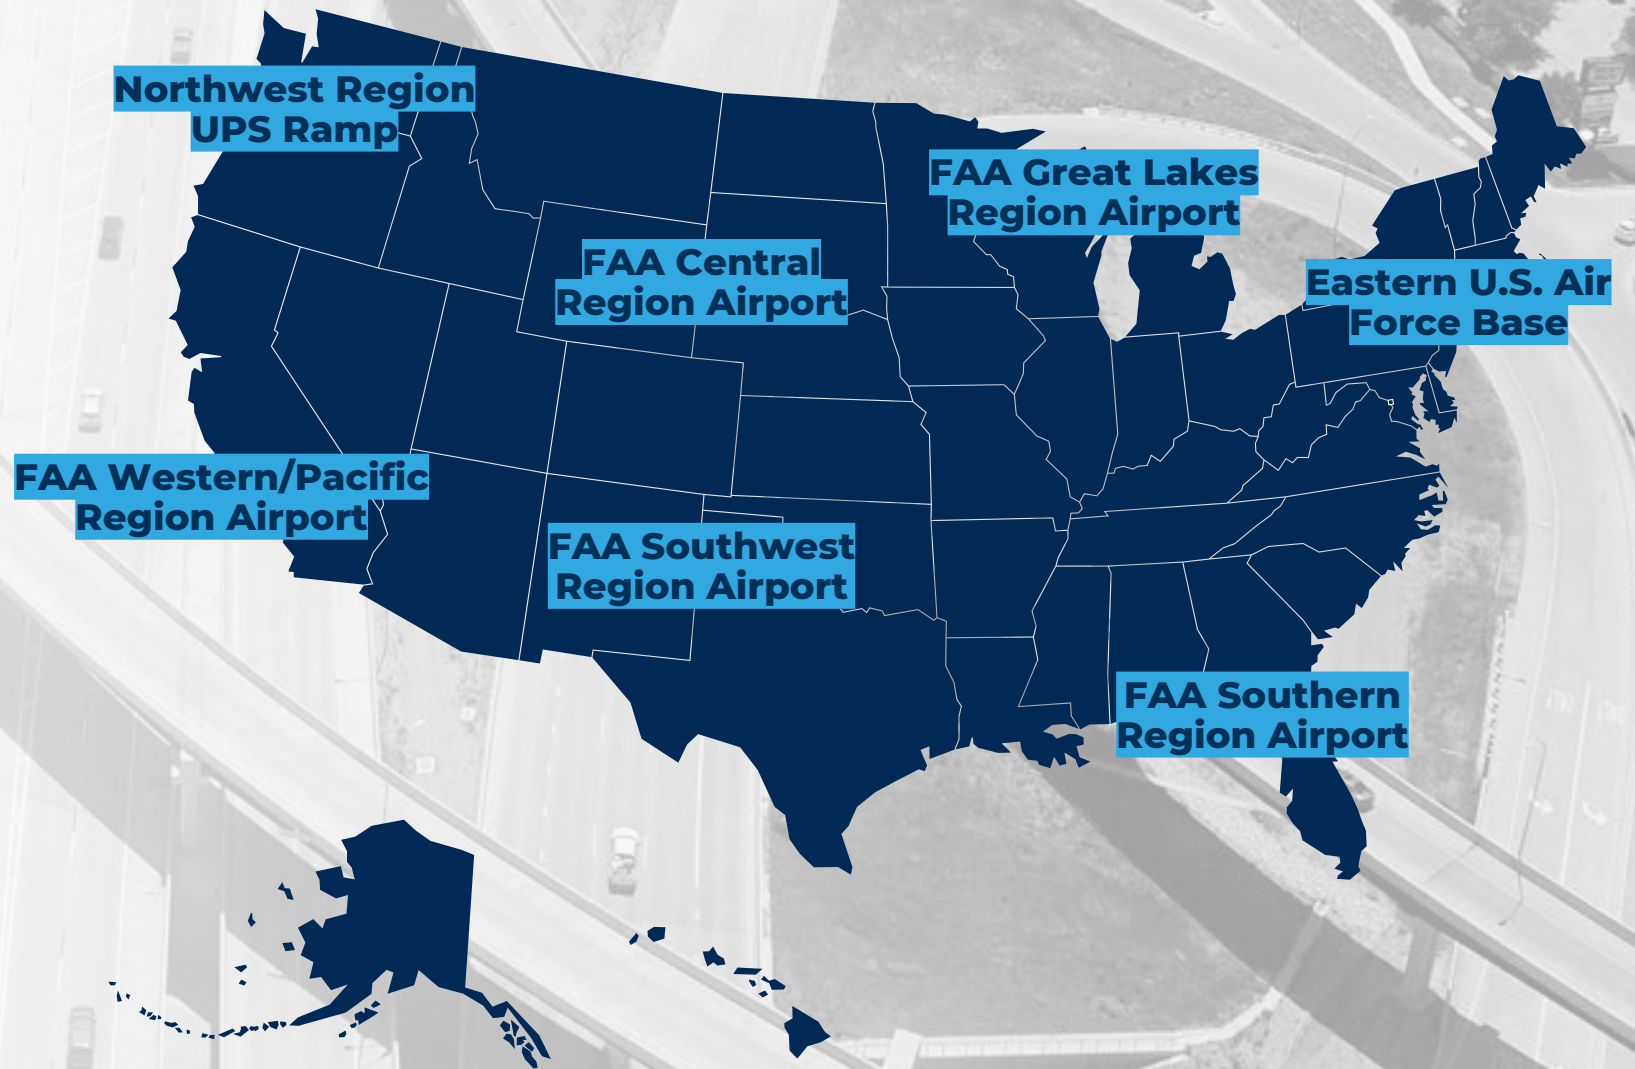

Chapter/ Affiliate Support

ACPA staff provides training/education and extensive support to the Chapter/State partners, specifically to state/federal DOT officials. The work translates to professional development, continuing education, and market promotion. In addition, staff lends expertise to the CP Tech Center and to member organizations.
